Berrybank Stage 2 Wind Farm

Did you know?

- The 26 Turbine Berrybank Stage 2 Wind Farm will join the operation 43 Turbine Berrybank Stage 1 Wind Farm
- Berrybank Stage 1 produces 180.6mw of electricity into the Victorian Grid and Berrybank Stage 2 will produce an additional 109.2mw of electricity
- Berrybank Stage 1 and Stage 2 are utilizing the Vestas V136-4.2 Wind Turbines
- The turbines have a hub height of 112m and a total tip height of 180m
- Each Wind Turbine can generate enough electricity to power approx. 2,730 homes and both Berrybank Stage 1 and Stage 2 will provide approx. 188,370 homes with electricity
- During the life of Berrybank Stage 2, GPG will be investing nearly 1 million dollars into the local communities surrounding the Wind Farm through several programs including a Community Grants Program

Construction Update

Construction has been moving **forward** at a steady pace, despite the latest lockdowns. The concrete contractors have **completed** pouring **17** out of the 26 Wind Turbine Generator Foundations. The electrical contractors have been able to push on despite inclement weather that has occurred over the past month and have completed laying **31km** out of the 62km of underground medium voltage cables. With the first shipment of components **arriving** at the Geelong Port, these components include **Tower Sections, Blades, Nacelles** and **Hubs**, We have now seen the **first** of these components **arrive on-site**, Over the coming months we will see daily deliveries of these components. The components will be arriving on-site via **2 approved routes**, from Geelong directly via the Hamilton Highway and from Geelong via Colac. Over the coming months, there will continue to be **traffic control** measures on the local roads at various locations around the Berrybank Wind Farm Site where there will be **upgrading works, drainage works or road crossings**. As per the Traffic Management Plan, our contractors will ensure as **little impact** to the local traffic as possible.
